

GDM Converge Industry Dashboard

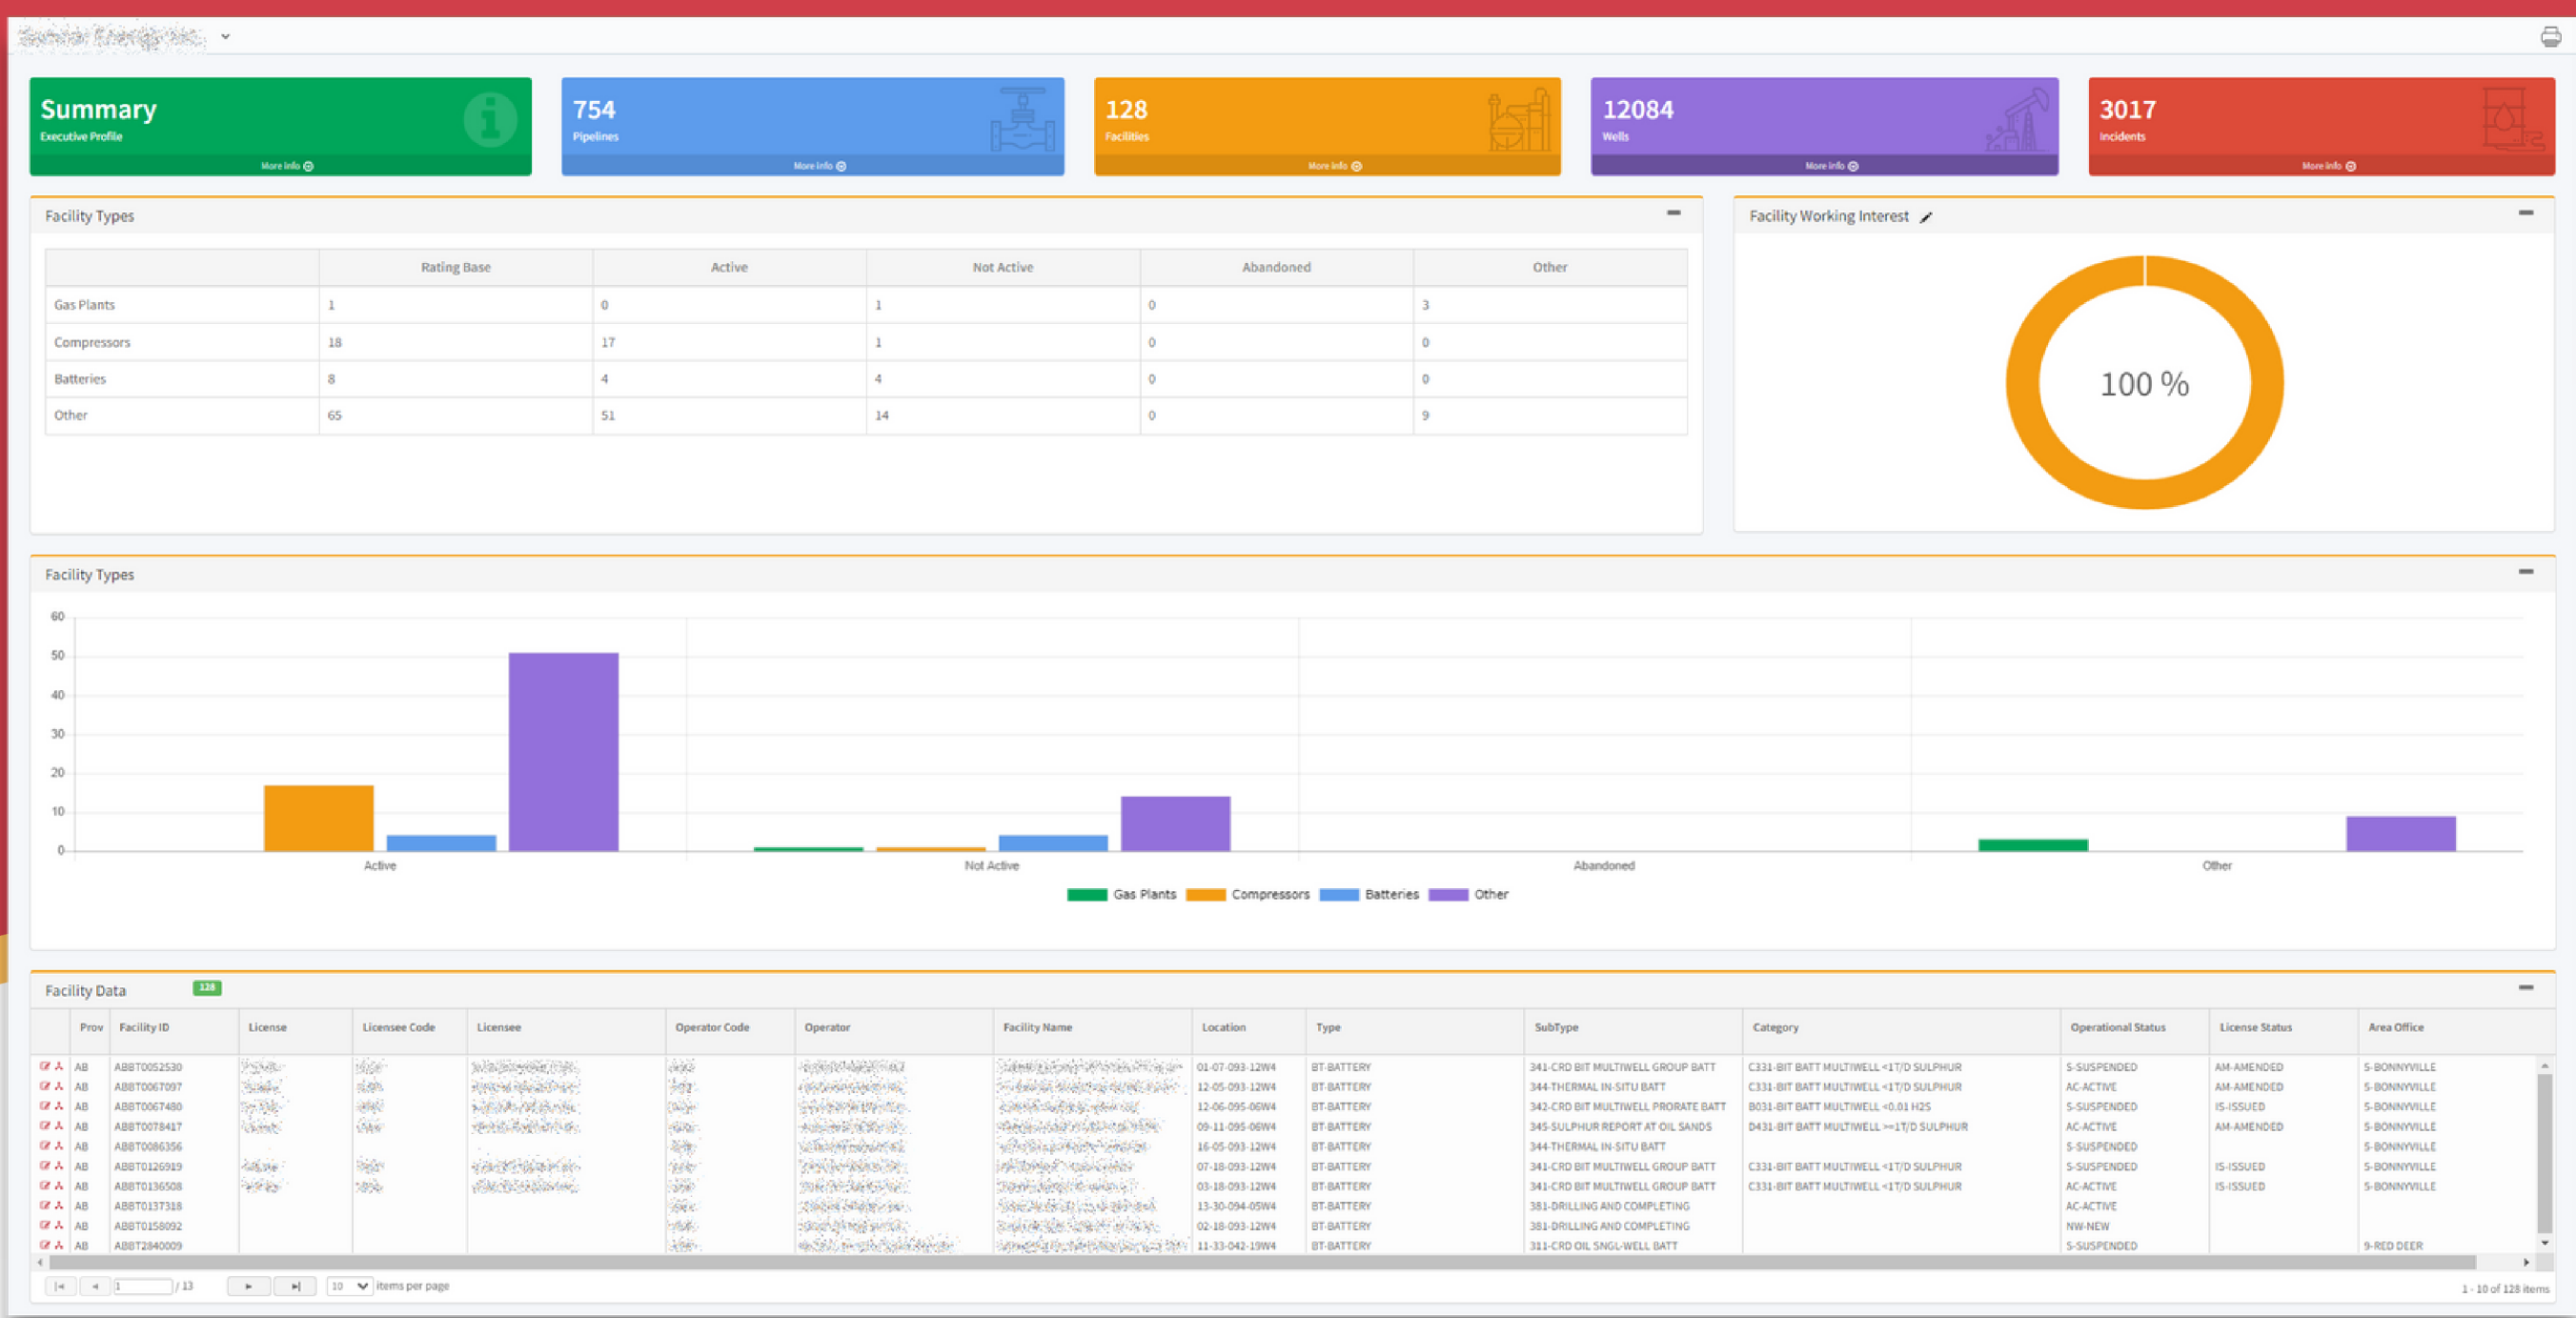

Access dashboards that provide an overall understanding of industry performance, leveraging the only spatially corrected and validated data in the energy industry. Our dashboards include GDM benchmark risk profiles including pipelines, facilities, wells, water crossings, and incidents.

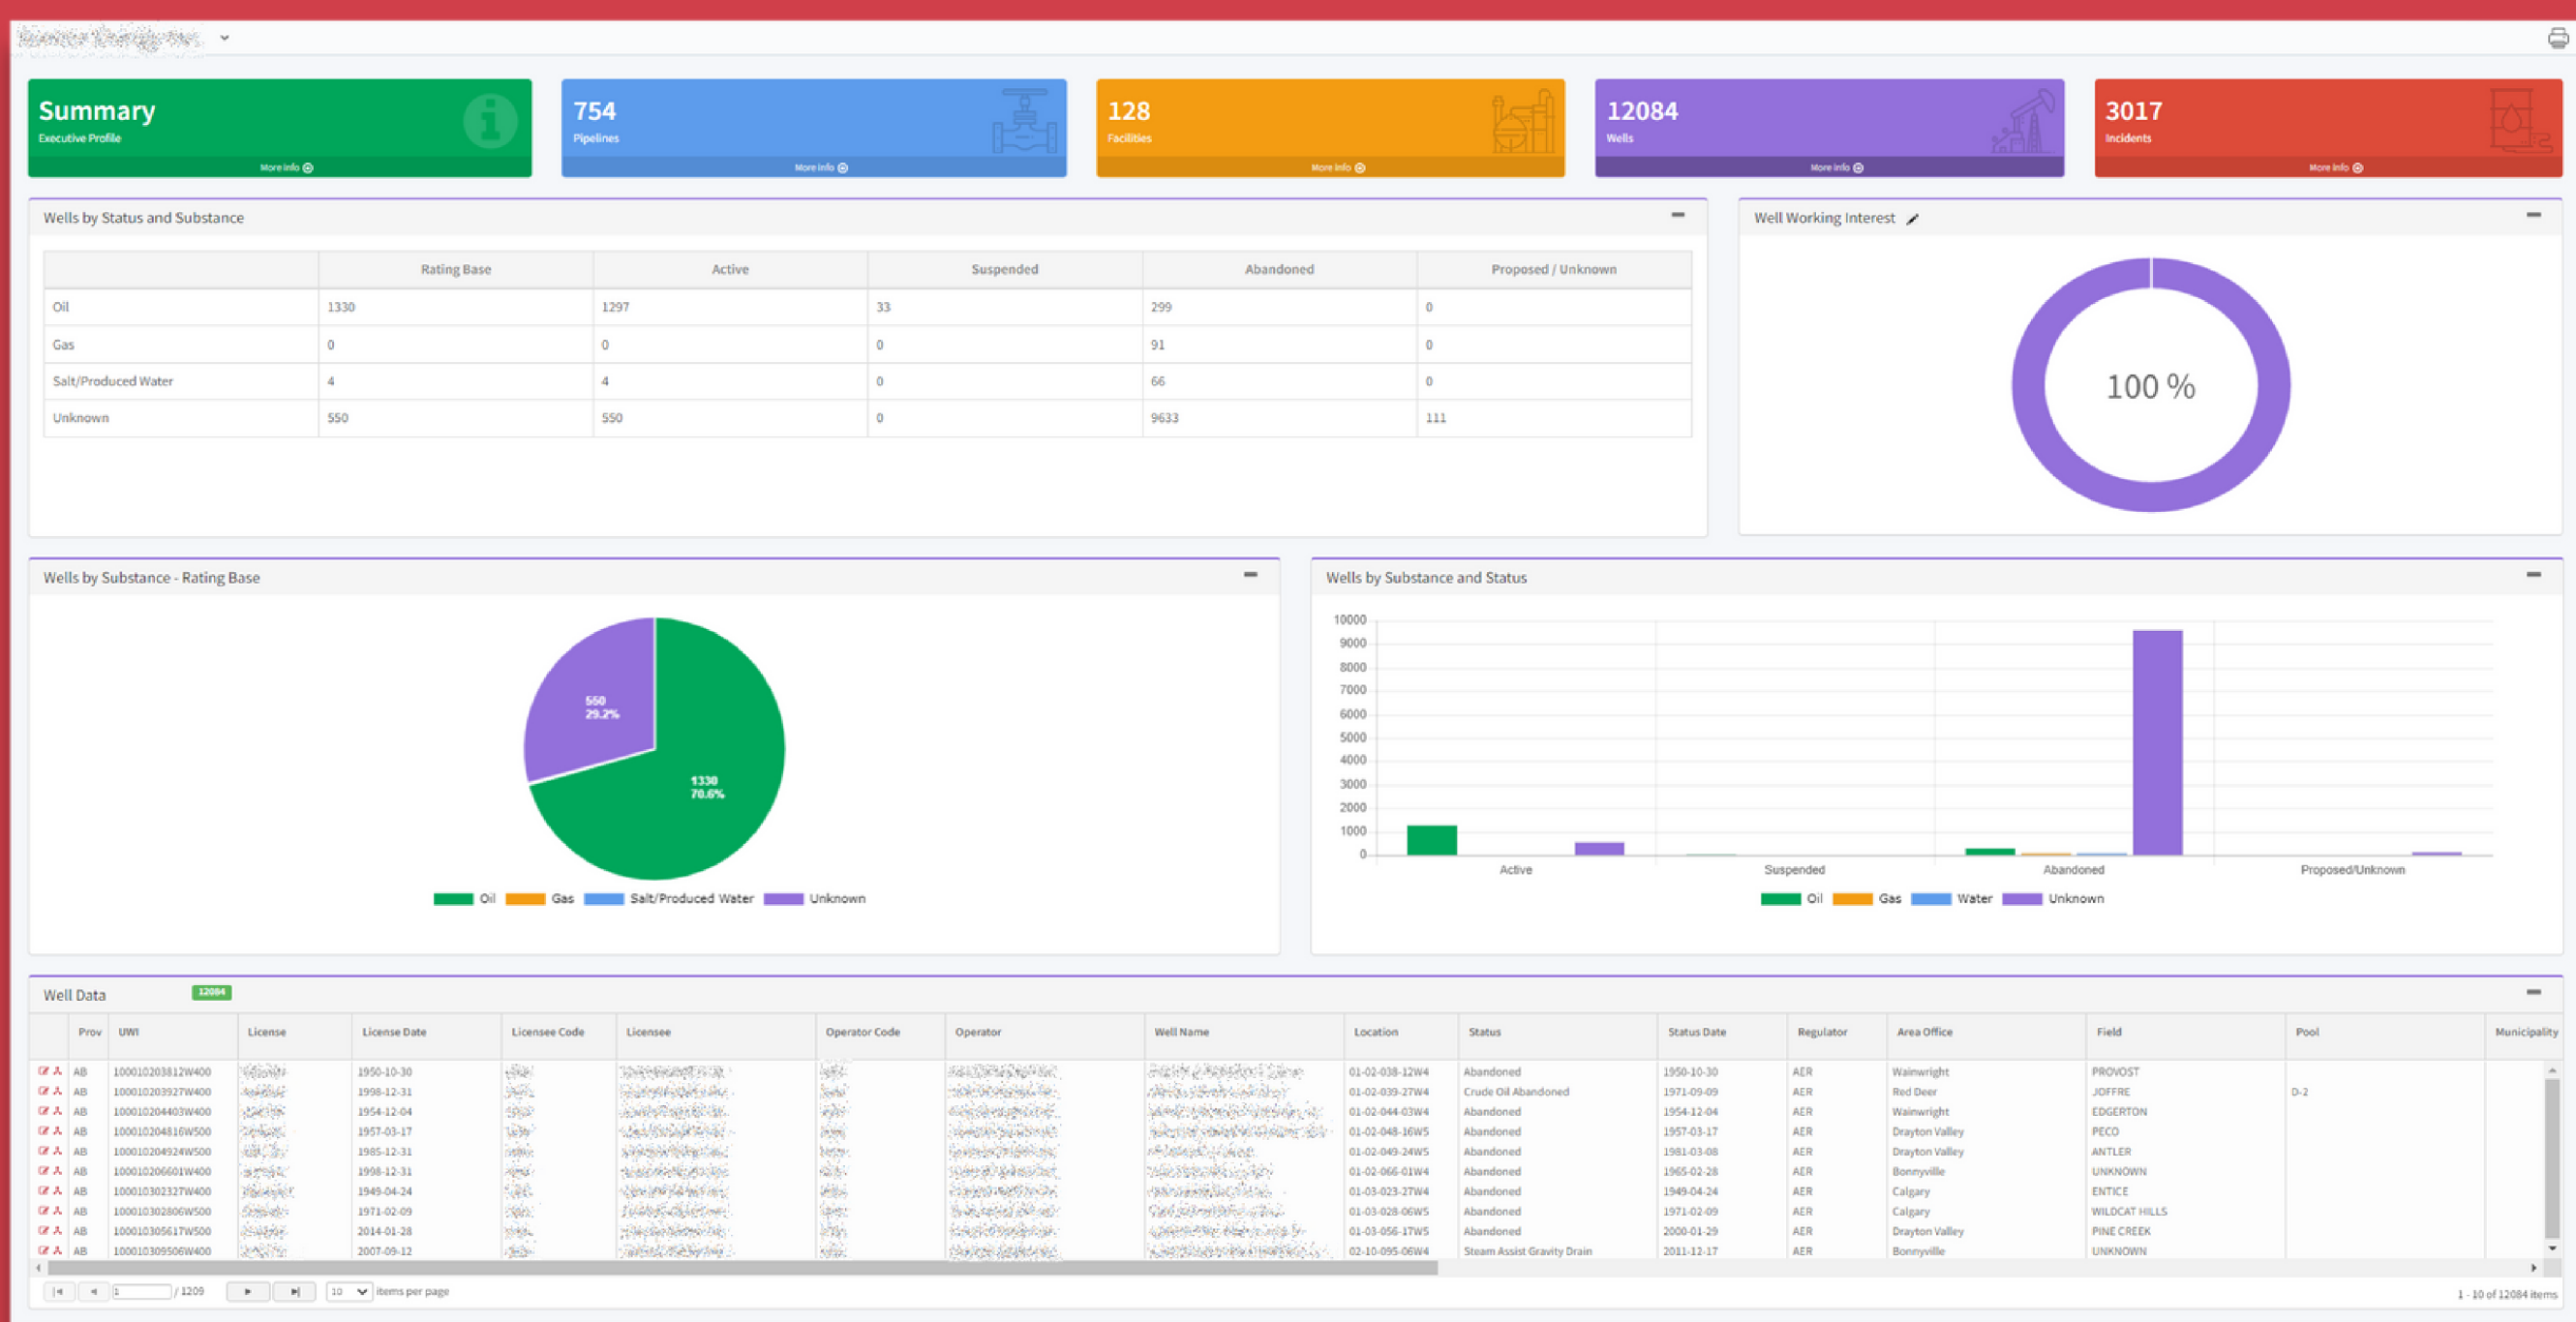

The Summary Dashboard offers a high level look at a company's pipelines, wells, and facilities including gross pipelines by substance (excluding freshwater), rating base by asset type, pipeline crossing matrix including Strahler Stream Order, and a pipeline risk matrix.

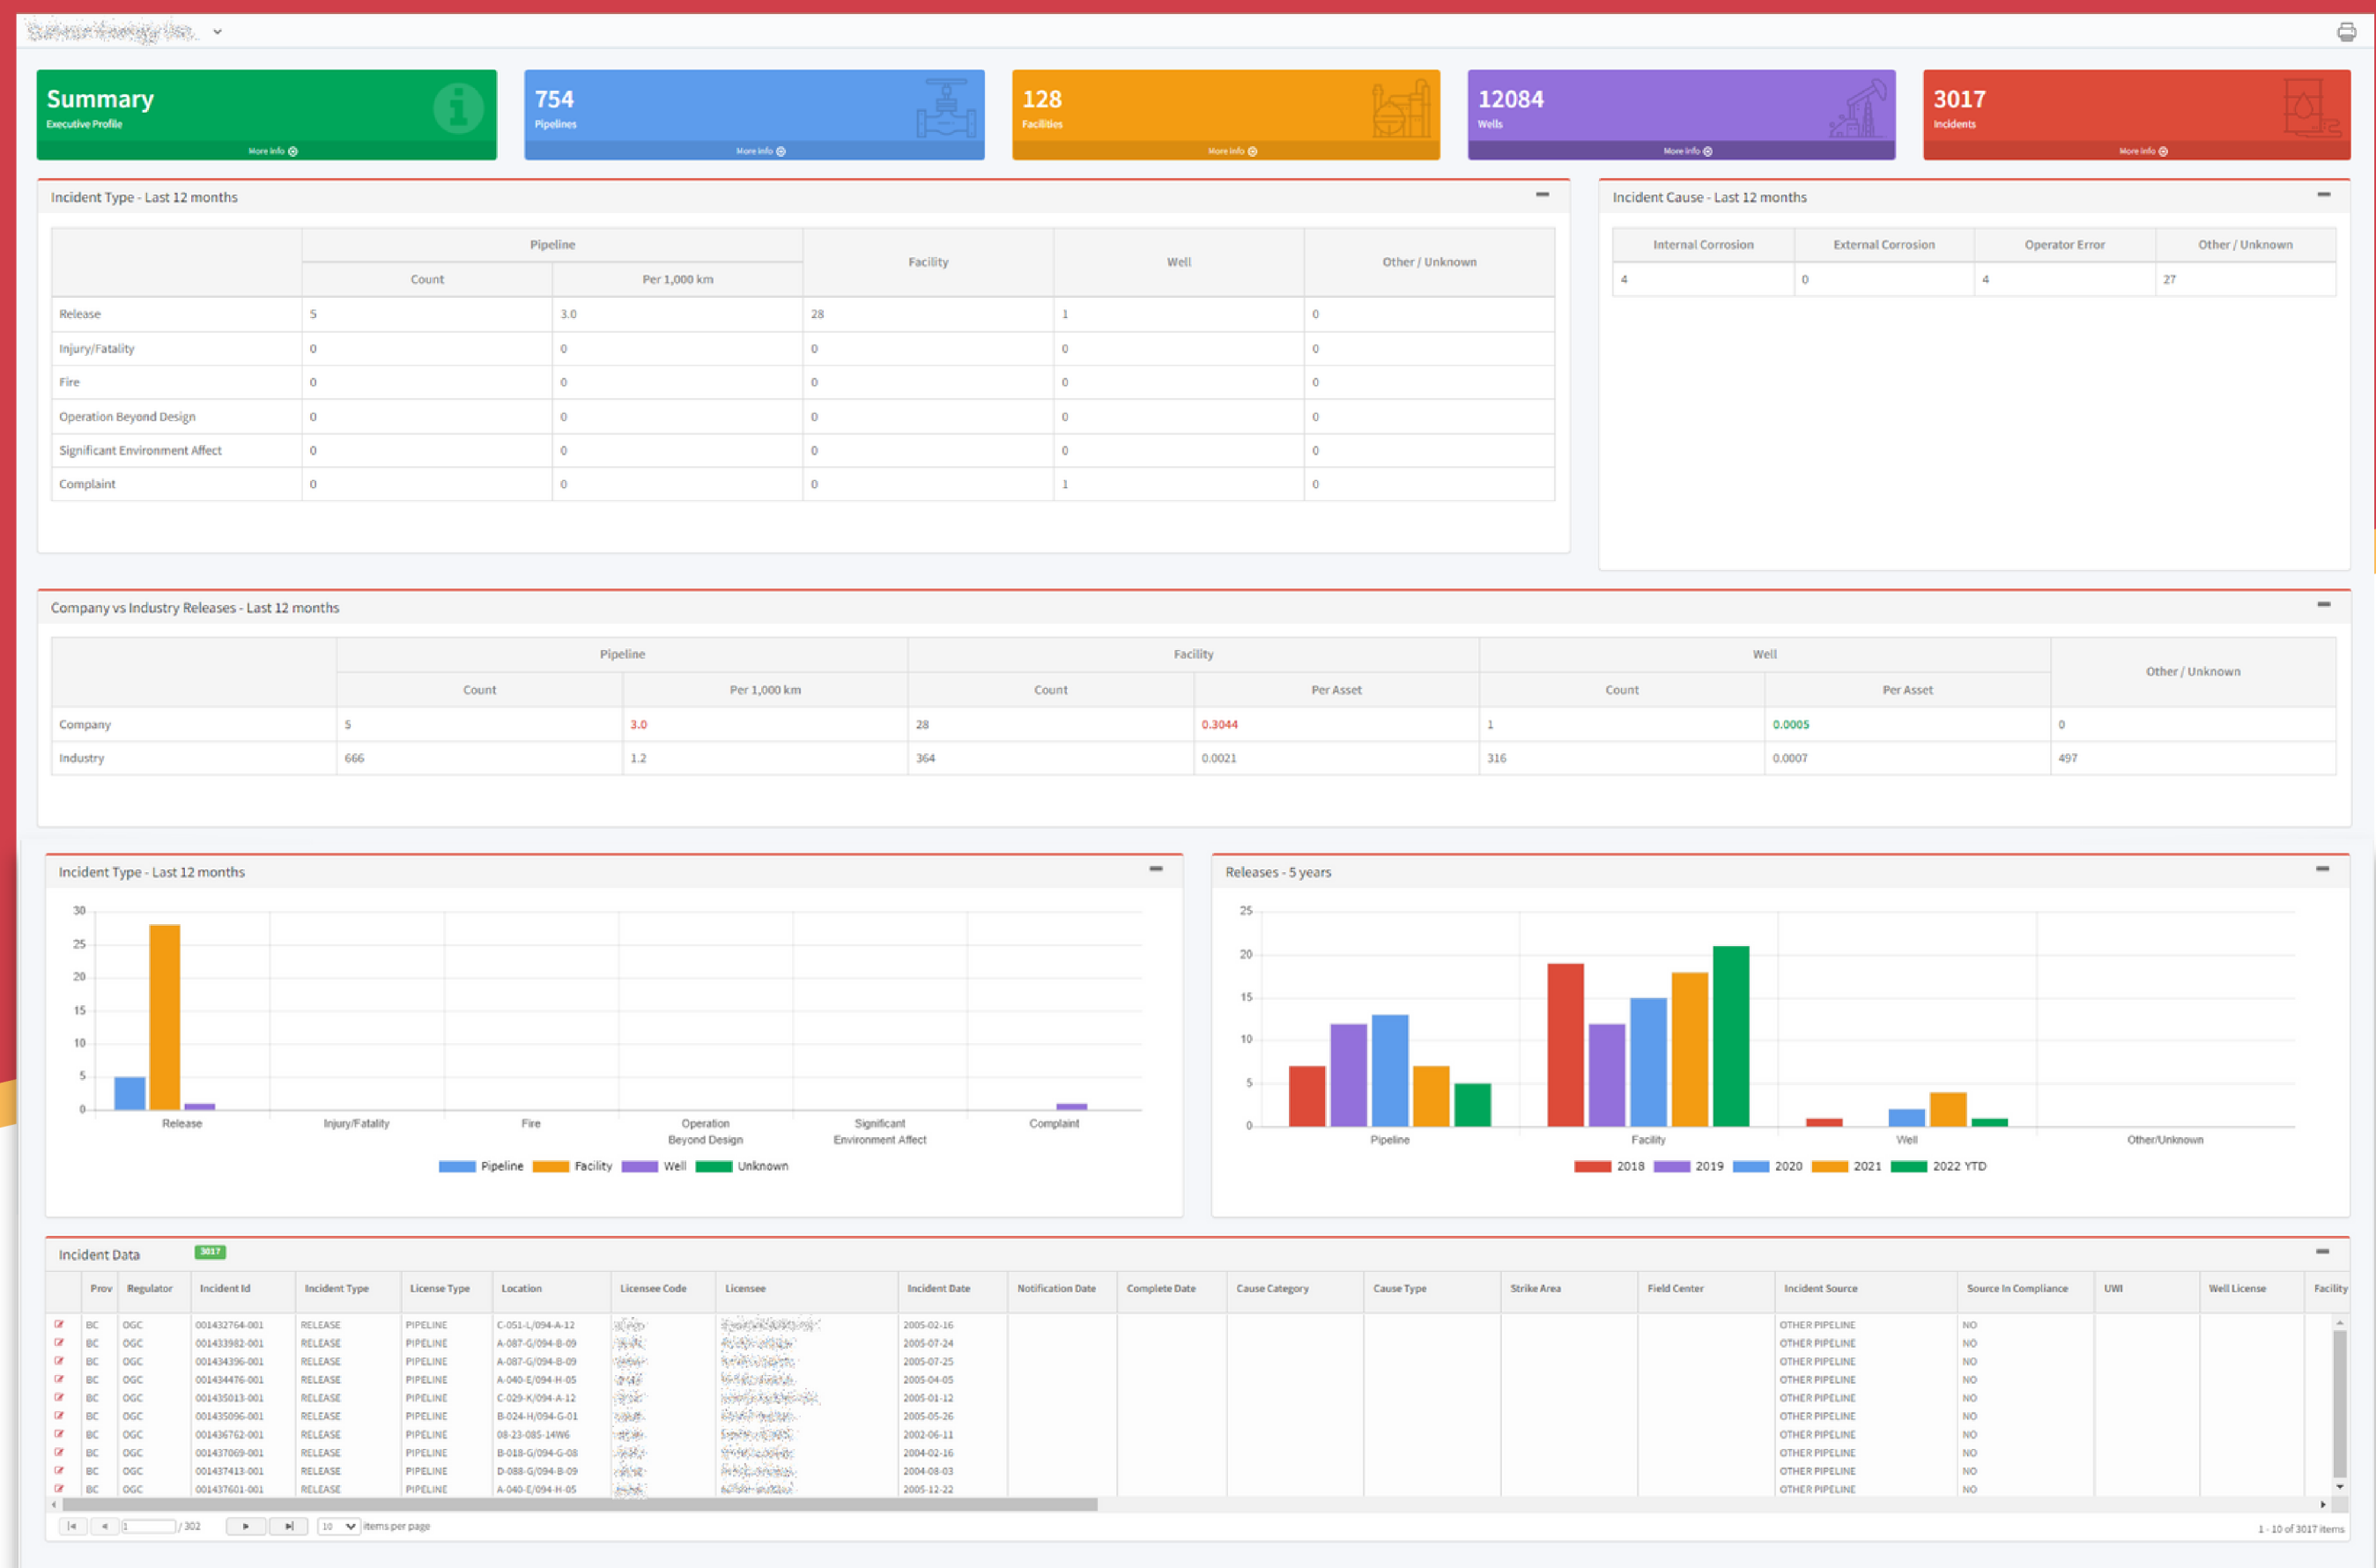

The Pipelines Dashboard provides access to tables and charts of pipelines by outer diameter, substance and status, pipeline working interest breakdown, and access to a table housing overall pipeline information.

The Facilities Dashboard offers a high level look at a company's facility types (table and charts), working interest breakdown, and access to a table housing overall facilities information.

The Wells Dashboard provides access to tables and charts of wells by substance and status, well working interest breakdown, and access to a table housing overall well information.

The Incidents Dashboard provides an overview of activity over the last 12 months including incident types (across all asset types), cause, benchmark of company performance versus industry performance, a look at the releases that have occurred over the past 5 years, and a comprehensive incident.
